TONTARELLI

Striving to enforce its production and distribution system, **Tontarelli** addressed to CASSIOLI for design and deployment of an **automated storage** plant. This company, located in the region of Marche, Italy, is specialized in the plastic household articles sector. The supply is composed of an intensive warehouse with 6 rack feeders, integrated with an automated line for order processing. Every palletized, single-product load unit introduced in the warehouse comes directly from the production area or from the processing order area (as a returning loop after the taking, accomplished at the picking stations). Required performances have been accomplished through careful mechanical design and capitalizing on the features of CASSIOLI's software system, to maximize handling potentiality.
